

brava!®

Brava for OpenText ECM is the premier viewing, annotation and redaction choice for OpenText customers

Supports virtually all office, image and CAD formats, including PDF

What Our Customers Are Saying

"Reducing our environmental footprint is important. With Brava, we're not physically moving documents and we're not using all the paper to generate copies, so there's a positive environmental impact."

"Strategically, when it comes to future initiatives regarding our corporate document management system and handling of multiple formats, such as TIFF, PDF and others, including markup, we will look to Brava as a preferred choice."

Brava!® for OpenText eDOCS

View | Collaborate | Redact | Publish | Secure

Brava!® for OpenText eDOCS makes it easy to view, annotate and collaborate on virtually any file, including office and PDF documents, CAD drawings and image files, like TIFF and JPG. Brava's simple, easy-to-use interface makes large-scale deployments and rapid user adoption a reality in virtually any business environment. Brava makes sharing documents safe and easy, both inside and outside of the OpenText eDOCS repository.

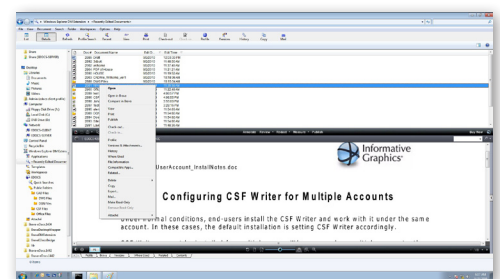

With broader requirements for information sharing, tighter regulations on privacy protection, and greater focus on protecting proprietary and sensitive data, Brava's redaction capabilities and Content Sealed Format (CSF) are essential. Users can remove sensitive content from the distributable rendition and publish it as a PDF, TIFF, or expiring CSF file, viewable with the free Brava Reader.

Key Features & Benefits

Document Viewing and Comparison

Brava offers a modern interface for viewing and annotating hundreds of file formats, making user adoption easy and training virtually unnecessary. The menus are broken out by function, making it more intuitive to end-users, and the interface can easily be re-skinned to suite any user's working environment. Brava provides industry-leading speed and fidelity for viewing and printing functions.

Compare different versions of a document or drawing with Brava's built-in comparison tool—useful for comparing drawing and document revisions/versions and faxed versus signed contracts. Brava offers pixel-to-pixel and text comparison modes so users can choose the view best suited to their file type. Comparison views can also include annotations for easy change verifications, ensuring no changes are left unincorporated.

Key Features & Benefits (continued)

Collaborative Review and Annotation

Users can add annotations to documents including colored boxes, text and arrows to highlight issues or areas that may need to be changed or investigated. Brava can also add watermarks and banners to documents and Brava's stamping features allow users to create custom stamps on documents or add stock stamps like APPROVED, REJECTED and CANCELED.

Changemarks® allow users to add comments to a document or drawing. And now with threaded discussions, groups of users can more easily collaborate and share comments. Changemarks threaded discussions lets users reply to each other and accept or reject comments—recording a complete audit trail of both the discussion and the outcome.

Redact Sensitive Information

Brava's redaction tools allow removal of sensitive information from documents, drawings and images, either automatically with intelligent pattern matching and text search or manually with area selection tools.

Brava offers a redaction draft mode to accommodate review cycles; the ability to redact full pages rather than just selected areas; a filter capability to find redactions without reason codes (to address Freedom of Information requirements); and the ability to do partial redactions, useful for redacting all but the last four digits of a credit card or bank account number.

Share Documents Securely

Brava enables secure sharing of files outside the OpenText eDOCS environment with secure CSF. Secure CSF is an encrypted, compressed format specifically designed to help companies control their content. With secure CSF, users can add document security controls which include adding password protection; restricting print, copy, layer views, and more; adding watermarks and banners; and time-expiring the file.

Working with CAD Files

Changemarks step reviewers through every comment, ensuring nothing is missed. This feature is particularly important for large drawings and multi-page files. With CAD files, vector data is not converted to pixels (rasterized), thus maintaining the integrity and fidelity of the drawing. Brava's compare feature allows users to easily view at-a-glance any modifications that have been made to a drawing.

A takeoff count allows users to count items on drawings such as doors and windows and aggregate areas for flooring or other materials for purchasing decisions. Users can create separate profiles for each count using different category names and colors, and then create a report in a spreadsheet format.
